

What I should already know:

Humans needs food, water and air to survive. They also need warmth and shelter.

Things can be living or non-living.

The stages of an animal's life cycle.

By the end of this unit I will know:

The human life cycle.

How they have changed since birth.

At each stage of the human life cycle, there are physical changes.

Year 2: Growing Up
Science: Biology

Working Scientifically

Identifying and classifying.
Gathering and recording data to help in answering questions.

Vocabulary

Adult	A person who is fully grown and mature
Baby	A very young child
Child	A young human being between three and twelve years old.
Life cycle	A series of changes in the life of a human, plant or animal
Pregnancy	The term when the baby is developing inside the female's womb

What do babies need?

Milk	Love
Cot	Family
Water	Baths
Games console	Sunlight
Car	Warmth
Money	Air
Medicine	Food
Shelter	Toys
To be talked to	Clothes
Songs and nursery rhymes	Books
Television	Holidays
Pram	Computer

Comparing babies and children

How is your life different about the way you move from when you were a baby?

- How has your food and the way that you eat it changed since you were a baby?
- In what way can you care for yourself now, that you couldn't when you were a baby?
- How is your appearance different from when you were a baby?
- What else can you do now that you couldn't do when you were a baby?

Measuring heads

Stages of human life

Baby Toddler Child Teenager Adult Elderly person

Investigation:

How do we change throughout our lives?

Do older children have bigger heads?
