## St Michael and All Angels PS

## What I should already know:

- The village I live in is called Woodchurch, which is in Wirral. There are villages and towns in Wirral, some of which are coastal.
- Wirral is in England, which is a country. England, which is in the United Kingdom, is in the continent of Europe.
- The seven continents (including South America) and five oceans.
- Wirral is a peninsula in North West England.

|     |  | Vocabulary: |                     |
|-----|--|-------------|---------------------|
|     | YEAR 6: Geography<br>Coasts  | Abrasion    | Pebble:<br>sandpa   |
|     |  | Attrition   | Rocks a<br>break in |
| Key | Facts at the end of this unit:   | Arch        | rocks to<br>A wave  |
| •   | There are 9 different coastal features:1. Tombolo; 2.<br>Beach; 3. Salt marsh; 4. Cave, Arch, Stack; 5. Bay;   | Вау         | A coast<br>such as  |
|     | 6. Headland; 7. Cliff; 8. Spit; 9. Peninsula.  | Beach       | A narro<br>areas.   |
| •   | Tombolos, beaches, salt marshes and spits are<br>formed as a result of deposition. Caves, arches and<br>stacks, bays, headlands, cliffs and peninsulas are<br>formed as a result of erosion. | Cave        | A natur<br>light an |
|     |  | Cliff       | A mass<br>straight  |
| •   | Longshore drift is the process of sediment transpor-<br>tation across a beach.   | Coast       | The po              |
|     |  | Deposition  | The lay the sea     |
| •   | Weaknesses in rock are exposed to erosion through processes of abrasion, solution and hydraulic action.  | Erosion     | The ge<br>away a    |
|     |  | Groynes     | Man-m<br>longsho    |
| •   | The construction of the Akosombo Dam in Ghana<br>and land reclamation in the United Arab Emirates<br>have accelerated coastal erosion.   | Headland    | A coast<br>a sheel  |
|     |  | Hydraulic   | Water is            |
| •   | Coastal erosion can be seen on our Wirral beaches.   | Action      | the incr            |
|     |  |             |                     |

## By the end of this unit:

- Extend locational knowledge and deepen spatial awareness of the world's countries including Russia, China, Iran, Thailand, South Africa, Senegal, India, Namibia.
- Coastal features in Africa (South Africa, Senegal, Namibia) and Asia (Thailand, China).
- Understand key processes in physical geography relating to coasts, erosion, transportation and links to urbanisation and economic activity. Interaction of human and physical processes to influence change landscapes and environments.
- Understand geographical similarities, differences and links between places through the study of human and physical geography.
- Build on knowledge of maps and atlases.
- Designing and planning geographical fieldwork on coastal erosion in our local area.

| Abrasion           | Pebbles and sediment being transported by waves scrape like   |  |
|--------------------|---|--|
|                    | sandpaper against rocks causing the rock to breakdown .   |  |
| Attrition          | Rocks and pebbles being transported in the water collide an   |  |
|                    | break into smaller fragments. This process causes transport   |  |
|                    | rocks to become smaller and rounder.  |  |
| Arch               | A wave-eroded passage through a small headland.   |  |
| Bay                | A coastal body of water connected to a larger body of water   |  |
|                    | such as a sea or lake.  |  |
| Beach              | A narrow strip of land separating a body of water from inland areas.  |  |
| Cave               | A natural opening in the ground extending beyond the zone light and large enough to permit the entry of man.          |  |
| Cliff              | A mass of rock that rises very high and is almost vertical, or straight up-and-down.                                  |  |
| Coast              | The point where the land meets the sea or ocean.  |  |
| Deposition         | The laying down of sediment carried by wind, flowing water, the sea or ice.   |  |
| Erosion            | The geological process in which earthen materials are worn away and transported by natural forces such as wind or wat |  |
| Groynes            | Man-made coastal defence features that limit the effects of longshore drift, reduce erosion and encourage deposition. |  |
| Headland           | A coastal landform, a point of land usually high and often wi   |  |
|                    | a sheer drop, that extends into a body of water.  |  |
| Hydraulic          | Water is forced into cracks in rock. Air becomes compressed an  |  |
| Action             | the increased pressure causes cracks to widen and deepen.   |  |
| Longshore<br>Drift | The process of sediment transportation across a beach.  |  |
| Peninsula          | A body of land surrounded by water on three sides.  |  |
| Salt marsh         | Coastal wetlands that are flooded and drained by salt water   |  |
|                    | brought in by the tides.  |  |
| Solution           | Weak acids in salt water create chemical reactions which dis  |  |
|                    | solve and erode rock such as limestone and chalk.   |  |
| Spit               | Narrow coastal land formation that is tied to the coast at one end.   |  |
| Stack              | A geological landform consisting of a steep and often vertica   |  |
|                    | column or columns of rock in the sea near a coast, formed b   |  |
|                    | wave erosion .  |  |
| Stump              | The eroded remains of a sea stack, often looking like a lump  |  |
|                    | of rock sticking up from its surroundings.  |  |
| Tombolo            | One or more sandbars or spits that connect an island to the   |  |
|                    | mainland.   |  |
| Urbanisa-          | The increase in the proportion of people living in towns and  |  |
| tion               | cities.   |  |
